

“The importance of integrated, all-source analysis cannot be overstated. Without it, it is not possible to ‘connect the dots.’ No one component holds all the relevant information. “

The 9-11 Commission Report: 07/22/04

“...our nation has learned with painful clarity that failure to share, coordinate, and connect available intelligence can have devastating consequences.”

U.S. Congressional Record: 09/21/04

Our Partners

We have developed strong partnerships with industry leaders who provide highly focused expertise to our clients.

Next Level Intel™ – Analyst Collaboration Tools

LPA's Next Level Intel™ (NLI) is a suite of tools that connects existing intelligence data and image repositories.

- » NLI Manager™ - Distributed database of targets and features
- » NLI Integrator™ - Client services integration into NLI Manager™
- » NLI Desktop™ - Collaborative image analysis user interface
- » NLI Video Bookmark™ - Motion imagery feature identification

NLI automatically integrates disparate observations, conclusions, and analyses across departments and organizations. This puts more information in the hands of professional analysts and contributes to the Intelligence Community (IC) mission of delivering composite intelligence.

Collaborative Geospatial Intelligence Analysis

- » Analysts track geospatial information as features or targets.
- » The system records analysts' observations regarding features.
- » Features, observations and confidence levels are tracked as a hypothesis. Analysts can see the way these characteristics change over time.

Integrated Intelligence

- » NLI integrates with existing product libraries and analysis tools.
- » NLI supports multiple sensors, combining motion video, aerial, and satellite photography.

Confidence... Trust... Relevance...

NLI encourages analysts to share their “shoebox” of impressions by providing a sliding scale for:

- » *Confidence* in their own analysis, based on facts-at-hand
- » *Trust* in the analysis of others, based on time, sensors, people.
- » *Relevance* of a detail to the current analysis.

About LPA Systems

LPA is a leader in developing solutions for spectral image analysis and geospatial intelligence applications. We develop systems to analyze and organize data into an easy-to-use, single source of actionable information for the defense, geospatial and business communities.

LPA's Geospatial Intelligence - Exactly what you need to know.™
